

Top 5 reasons to upgrade ▶

- ▶ New digital controls deliver an unprecedented level of control
- ▶ Create, load, and adjust favorite settings with a swipe of a finger
- ▶ Saved settings allow you to overcome staff turnover and loss of 'trade' information
- ▶ Get new hires up to speed quickly with simplified training
- ▶ Save time and money with remote diagnostics, maintenance, and assistance

MORE CONTROL LESS WASTE

MAXI-CAP™ PLATINUM REFIT
A new level of control and customization

Oliver™

MAXI-CAP™ PLATINUM REFIT

Features

Overview

- ▶ Complete individual fan controls
- ▶ Electronically controlled eccentric speed (VFD v. variable speed pulley)
- ▶ Position-sensing hydraulic cylinders on end-raise and side-tilt
- ▶ Automatic- and position-sensing feeder
- ▶ For Maxi-Cap™ 3600 and 4800 models

Automation controls

- ▶ Monitor and adjust machine settings
- ▶ Fine-tune settings in 1 percent increments
- ▶ Operate at the machine or through a plant's control system

Recipe storage

- ▶ Store settings to allow better separation from the beginning of a run
- ▶ Easily switch between products for predictable and repeatable results
- ▶ Save hours in fine tuning and save more product discard

Diagnostics and maintenance

- ▶ Quickly isolate source of an issue
- ▶ Hour meter aids in timely maintenance

Remote access and support

- ▶ Operate a machine remotely via a plant's network
- ▶ Access machine over the Internet to diagnose operational issues and deploy updates

Why upgrade?

To keep up with the ever-changing demands of production, your line must be able to adjust and adapt on the fly—and the new Maxi-Cap™ Platinum Refit puts that control at your fingertips!

Repeatable results

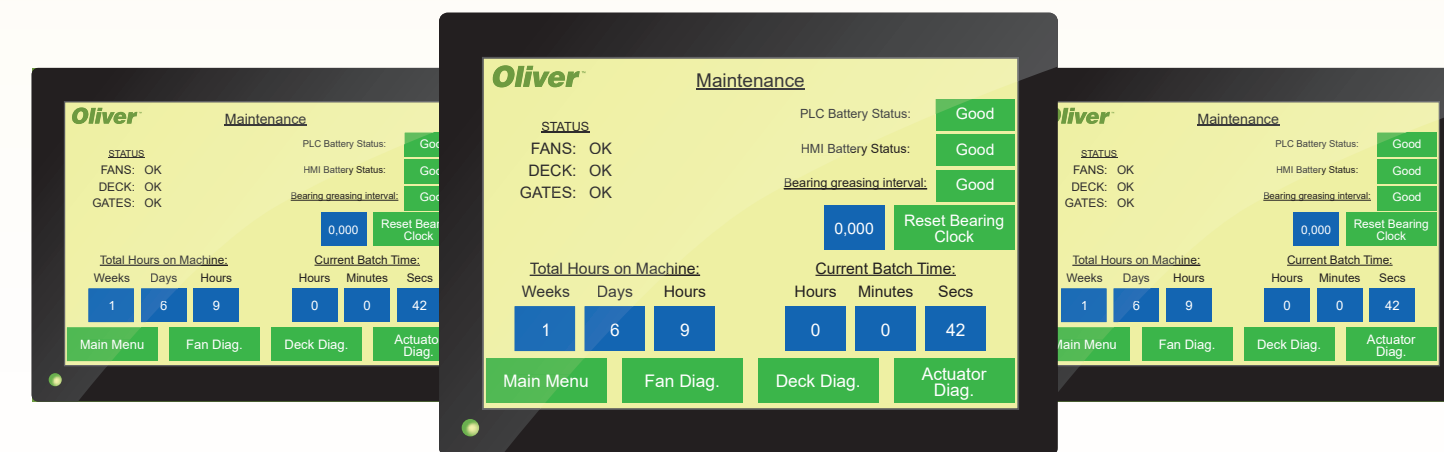

The highlight of a Maxi-Cap™ Platinum refit all but eliminates calibration and adjustment time, and makes it easier to switch between seed size and product profiles. Every one percent change in the amount of discard could add up to almost 30 bushels over an 8 hour span when compared to a single Maxi-Cap™ 3600. This upgrade will pay for itself in no time!

Single-swipe access

Use the touchscreen display to quickly switch between products quickly and access recipes, conduct diagnostics, monitor system status, and more. This new digital system mitigates the loss of situational information due to staff turnover and ensures that your team will spend less time on training, setup, and ensure a consistent run each and every time.

Expert installation & deployment

Oliver will coordinate with your team to develop a strategy for the refit that minimizes downtime and identifies any potential obstacles to a smooth roll-out of your enhanced Maxi-Cap™ equipment. In many cases, the refit can be completed in as little as one week.
