LEVEL UP

Save money, improve performance, and breathe new life into your older Oliver equipment.

Oliver's factory upgrade kit* introduces full automation for all aspects of gravity table adjustment, operation and clean out. The integration of programmable logic circuitry and electronic control/hydraulic sensors add both precision and repeatability over separator input parameters, including:

- ▶ Air control
- ▶ Table tilt
- ▶ Eccentric vibration
- ▶ Feed rate

The upgrade kit—which can usually be installed on-site in a matter of days—provides measurable improvements in consistency and performance, and is compatible with most plant-wide integrated processing scenarios.

Applies to Maxi-Cap Gravity Separator models 2400, 3000, 3600 and 4800.

Why automate your Oliver MaxiCap?

- ▶ New digital controls deliver an unprecedented level of control
- ▶ Create, load, and adjust favorite settings with a swipe of a finger
- ▶ Get new hires up to speed quickly with simplified training
- ▶ Saved settings allow you to overcome staff turnover and loss of 'trade' information
- ▶ Save time and money with remote diagnostics, maintenance, and assistance

RETROFIT

PEACE OF MIND

The support of our products is a big reason why Olivers sold in the 1930s are still in use today.

Your Oliver machine is the lifeblood of your processing operation. We keep detailed records on nearly every Oliver ever built, which means we're your best resource to repair, maintain, and upgrade your equipment. Our engineering and manufacturing teams can service machines far outside the warranty period.

Make olivermanufacturing.com/service-support your first stop for:

- ▶ Customer service
- ▶ Replacement parts
- ▶ Accessories and upgrades
- ▶ Refurbishing services
- ▶ Troubleshooting tips
- ▶ On- or off-site repair
- ▶ Locate your local sales representative

Our service and support package includes genuine replacement parts from a large in-stock inventory, a fast order and shipping system, meaningful technical support and professional engineering and installation help from the best distributing dealers in the business. Many parts orders ship the same day.

We stand behind every Oliver gravity separator, sizer, destoner, and fluidized bed dryer no matter how old it is, whether in warranty or out.

Get the very best out of your investment.

JUST LIKE NEW

Give your Oliver a new lease on life by restoring it to 'like new' condition with our refurbishing service.

When your gravity separator or destoner carries the Oliver name, you are assured of decades of reliable, durable performance.

When parts wear out, the same manufacturing technicians who build new Oliver machines will re-manufacture or replace worn out parts to return your Oliver machine to original performance.

- ▶ Expansive inventory of parts
- ▶ Thorough inspection of machine
- ▶ New part fabrication available
- ▶ Guaranteed results

REFURBISH

TIP TOP SHAPE

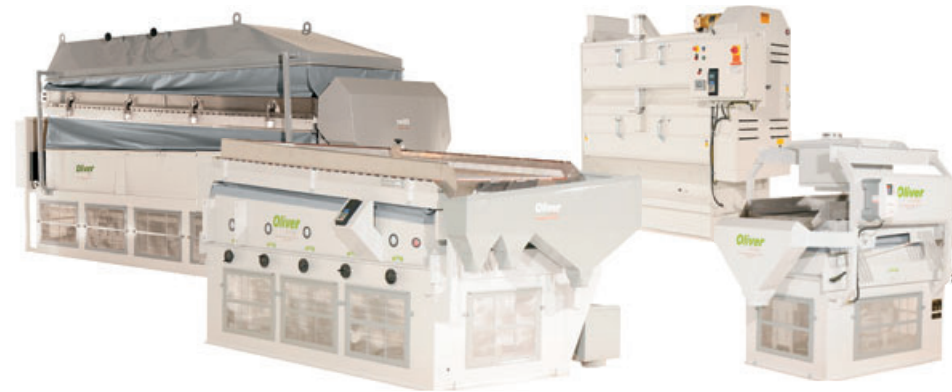

Keep your Oliver running at peak performance and reduce long-term wear and tear.

Our equipment lasts for decades, and that's attributed to quality engineering and construction. To keep your gravity separator or destoner operating at peak efficiency, it still requires regular maintenance.

It's a great idea to perform service prior to the start or at the conclusion of processing season to make certain that your equipment is ready to deliver when you need it the most.

Oliver has resources to help you do just that!

- ▶ In-shop or on-site options
- ▶ Full line of equipment
- ▶ Seasonal maintenance plans
- ▶ Operating specifications
- ▶ Online and phone support
- ▶ Manuals and instructions

Fluidized bed dryers

Gravity separators

Precision sizers & destoners

MAINTAIN

EDUCATE

Keep your staff up-to-speed on the best ways to run your Oliver and achieve optimal results.

It's not uncommon for an Oliver to be passed down from generation to generation and all the original instruction and training can be lost to time. Add the inevitable loss of knowledge due to employee retirement and seasonal help, and it is easy to understand how the best practices, maintenance, and settings can vary from year to year or run to run—which costs you time and loss profit.

Let our expert team of trainers help tighten up your operations, fill in missing blanks, and bring you and your staff up-to-speed on everything your Oliver can do!

Training options include:

- ▶ Operation
- ▶ Settings and configuration
- ▶ Maintenance and repair
- ▶ Train the trainer
- ▶ On-site instruction
- ▶ Online webinars
- ▶ Group setting or one-on-one
- ▶ Annual discounts for recurring
- ▶ Customized programs
